

Frontend Engineer

Turn product design into fast, polished interfaces users trust.

LOCATION

Remote (global)

TYPE

Full-time

About Flaredog

Flaredog takes enterprise AI from idea to secured production, end to end. Alongside our delivery work we build a product portfolio that turns recurring enterprise pain into software: DuraGraph, Finsightly, Tradoing, and UpstackLab. We are founder-led, early-stage, and expanding across Asia.

The role

You build the React frontend our customers and internal teams use every day. You care about performance, accessibility, and the small details that make software feel solid. You work closely with design and backend engineers in a small, senior team.

What you will do

- Build and maintain React interfaces across our products.
- Turn design files into responsive, accessible, production-ready UI.
- Own frontend performance: load times, rendering, and state management.
- Review pull requests and help set frontend standards.

What you bring

- Strong TypeScript and React experience in production.
- An eye for detail: spacing, states, empty states, and edge cases.
- Comfort working directly with designers and backend engineers.
- Clear written communication in code review and design docs.

Nice to have

- Experience with Tailwind, shadcn, or component design systems.
- Exposure to data-heavy or dashboard-style interfaces.
- Open-source contributions we can look at.

What we offer

- Fully remote. Work from anywhere in your timezone.

- Real ownership of your area from day one.
- A small, senior team and direct founder access.
- Async-first, low-meeting culture.

How to apply

Apply at <https://flaredog.com/careers/frontend-engineer>. We post shortlist updates on LinkedIn, follow Flaredog so you catch yours: <https://www.linkedin.com/company/flaredog/>. Want to move faster? DM us on LinkedIn, mention the role, and introduce yourself.
