

Full-Stack Engineer

Own features end to end, from the database to the pixels.

LOCATION

Remote (global)

TYPE

Full-time

About Flaredog

Flaredog takes enterprise AI from idea to secured production, end to end. Alongside our delivery work we build a product portfolio that turns recurring enterprise pain into software: DuraGraph, Finsightly, Tradoing, and UpstackLab. We are founder-led, early-stage, and expanding across Asia.

The role

You build and ship product features across the stack, from schema and API to the React frontend. You work in a small senior team with direct founder access, and you own what you ship in production.

What you will do

- Build features end to end: data model, API, and React UI.
- Ship to production and own reliability, not just the happy path.
- Write clear code and clear design docs a small team can move fast on.
- Review pull requests and help set engineering standards.

What you bring

- Strong TypeScript, React, and Node experience in production.
- Comfort owning a feature end to end in a small team.
- A real understanding of databases, APIs, and testing.
- Clear written communication in code review and design docs.

Nice to have

- PayloadCMS, Next.js, or Postgres experience.
- Work with LLM or AI features in production.
- Open-source contributions we can look at.

What we offer

- Fully remote. Work from anywhere in your timezone.
- Real ownership of your area from day one.

- A small, senior team and direct founder access.
- Async-first, low-meeting culture.

How to apply

Apply at <https://flaredog.com/careers/full-stack-engineer>. We post shortlist updates on LinkedIn, follow Flaredog so you catch yours: <https://www.linkedin.com/company/flaredog/>. Want to move faster? DM us on LinkedIn, mention the role, and introduce yourself.
