

Product Designer

Shape the product experience across a growing portfolio.

LOCATION

Remote (global)

TYPE

Full-time

About Flaredog

Flaredog takes enterprise AI from idea to secured production, end to end. Alongside our delivery work we build a product portfolio that turns recurring enterprise pain into software: DuraGraph, Finsightly, Tradoing, and UpstackLab. We are founder-led, early-stage, and expanding across Asia.

The role

You own product design end to end: research, flows, UI, and the design system. You work directly with the founders and engineers to turn rough problems into interfaces people trust. Decisions here carry weight, this is a small team where design has a real seat at the table.

What you will do

- Design flows and interfaces for new features, from sketch to shipped UI.
- Own and grow a design system engineers can build from consistently.
- Run lightweight user research and turn findings into concrete changes.
- Work directly with founders and engineers through the full build cycle.

What you bring

- A portfolio showing shipped product design, not just concept work.
- Comfort with ambiguity: you can design from a rough problem statement.
- Working fluency in Figma and modern design-to-code handoff.
- Clear communication with engineers and founders.

Nice to have

- Experience designing for data-heavy or enterprise software.
- Basic front-end coding skills.
- Experience building or maintaining a design system.

What we offer

- Fully remote. Work from anywhere in your timezone.

- Real ownership of your area from day one.
- A small, senior team and direct founder access.
- Async-first, low-meeting culture.

How to apply
